Section 5 - FIREFIGHTING MEASURES																																																																																		
5.1 Extinguishing Media Suitable Extinguishing Media: Use extinguishing measures that are appropriate to local circumstances and the surrounding environment. 5.2 Special hazards arising from the substance or mixture No further relevant information available. 5.3 Advice for firefighters As in any fire, wear NIOSH-approved self contained breathing apparatus and appropriate protective clothing. Product as supplied and shipped is highly unlikely to release sufficient dust to constitute a combustible dust explosion hazard. Depending on airborne concentration, moisture content, particle diameter, surface area and exposure to an ignition source, airborne dust may ignite and burn with explosive force in a contained area.																																																																																		
Section 6 - ACCIDENTAL RELEASE MEASURES																																																																																		
6.1 Personal precautions, protective equipment and emergency procedures Use personal protective equipment. Avoid dust formation. Avoid breathing vapors, mist or gas. Ensure adequate ventilation. Evacuate personnel to safe areas. Avoid breathing dust. 6.2 Environmental precautions Do not let product enter drains. 6.3 Methods and materials for containment and cleaning up Pick up and arrange disposal without creating dust. Sweep up and shovel. Keep in suitable, closed containers for disposal. Minimize compressed air blowdown or other practices that generate high dust levels. See Section 8 for appropriate personal protective equipment.																																																																																		
Section 7 - Handling and Storage																																																																																		
7.1 Precautions for safe handling Avoid contact with skin and eyes. Avoid formation of dust and aerosols. Further processing of solid materials may result in the formation of combustible dusts. The potential for combustible dust formation should be taken into consideration before additional processing occurs. Provide appropriate exhaust ventilation at places where dust is formed. 7.2 Conditions for safe storage, including any incompatibilities Keep container tightly closed in a dry and well-ventilated place. See Section 8 for OSHA permissible exposure limit(s)																																																																																		
Section 8 - EXPOSURE CONTROL / PERSONAL PROTECTION																																																																																		
8.1 Control parameters Contains no substances with occupational exposure limit values. 8.2 Exposure controls Normal Handling Conditions Engineering Controls: If necessary use ventilation system to keep airborne dust concentration below permissible exposure limits. Ventilation to control dust should be considered where potential explosive concentrations and ignition sources are present. The design and operation of any exhaust system should consider the possibility of explosive concentrations of dust within the system. Handle in accordance with good industrial hygiene and safety practice. Wash hands before breaks and at the end of workday. Respiratory Protection: For nuisance exposures use type P95 particle respirator. For higher level protection use type OV/AG/P99 respirator cartridges. Eye Protection: ANSI Z87+ approved dust goggles or safety glasses, if necessary, to avoid eye irritation. Skin Protection: Handle with gloves. Gloves must be inspected prior to use. Use proper removal technique to avoid skin contact with this product. General Hygiene: Maintain good housekeeping practices, wash hands after handling, avoid direct eye contact. Clean up areas where dust settles to avoid excessive accumulation of this combustible material. Minimize compressed air blowdown or other practices that generate high airborne-dust concentrations.
